To everyone else, "Alpha" looks like any ordinary, slightly bald-headed white cockatiel, but his hatching may be a significant step in the advancement of avicultural practices.

Greg J. Harrison, D.V.M. of the Research Institute for Avian Medicine, Nutrition and Reproduction in Lake Worth, Florida, has produced what is believed to be the first psittacine bred by artificial insemination. According to Dr. George Gee, reproductive physiologist at the Patuxent Wildlife Research Center in Laurel, Maryland, a fertile egg was produced in an Eclectus by artificial insemination at their facility, but the egg did not hatch.

Dr. Harrison's interest in this reproductive method began when he and Dr. Gee went to Puerto Rico in the spring of 1981 to experiment with this procedure in the endangered Puerto Rican parrot and its surrogate species, the Hispaniolan. Although semen was collected from these species with a technique Dr. Gee had used on cranes at Patuxent, the trials were not successful as expected.

In working with other species, only the pearly conure has produced a semen sample (and only one-tenth that of subsequent samples from the trained budgie).

The semen was transferred to one of the cinnamon hens by inserting the PCV tube ¾" into the cloaca and depositing it toward the approximate location of the vaginal opening, as direct observation was not possible. The eggs laid by this female on 2-13-82, 2-15-82 and 2-17-82 were all fertile. Her eggs after 2-17-82 were all infertile, as were all of the eggs of the other cinnamon hen.

The first egg was cracked on 2-28-82, repaired with parafin wax, and hatched on 3-2-82 in the incubator at 98.75°F, 86°F wet bulb. This albino baby weighed 3 grams and was named "Alpha."

"Alpha" was placed with foster parent budgies for the first six days, brought into the Propagation Center and raised from that point by hand-feeding. The other two eggs hatched on 3-5-82 and 3-7-82, respectively.

In working with other species, only the pearly conure has produced a semen sample. Attempts with a Queen of Bavarian conure, Blue and Gold, Green wing and Scarlet macaw, and Caymen Island amazon have not yet been successful.

As the first baby produced with artificial insemination was with full strength, direct deposit of semen, further study is being planned for possible diluents and storage conditions. But this is definitely a first step!
NEW!

BRASS BUCKLES
WITH AFA LOGO DESIGN
handcrafted in solid brass
by "Buckles in Brass"
T & M Mulroney, San Diego

TWO SIZES AVAILABLE
large, approx. 2 1/4" x 2 3/4" - $15.00
small, approx. 1 3/8" x 1 3/4" - $12.50

order more than one and
pay only $14. (lg), or $11.50 (sm)
Add $2 postage & handling
for each item

SEND CHECK OR MONEY ORDER TO:
American Federation of Aviculture
P.O. Box 1568
Redondo Beach, CA 90278

We sell only fat and healthy birds - Guaranteed!!
All birds can be shipped anywhere in the U.S., and
can be surgically sexed. We operate a U.S.D.A.
quarantine station.

Quantity prices are available on Macaws, Cockatoos,
Amazons, Finches and Softbills.
SPECIAL: Umbrella Cockatoos
